Annex 362 (Art. 9 let. c)

### **Reduction of Diffuse VOC Emissions**

### 1 Requirements for the operation of stationary installations

### 11 General requirements

### 111 Principle

All VOC relevant processes must be optimised with a view to reducing diffuse VOC emissions.

# 112 Exhaust air collection and purification

- <sup>1</sup> Processes must be conducted in closed systems, provided this is technically and operationally possible and economically acceptable.
- <sup>2</sup> The exhaust air from closed systems must be processed by the APP.
- <sup>3</sup> In the case of processes in non-closed systems, the exhaust air must be processed by the APP via suction hoods or shape-adapted source extractors with appropriate suction capacity either directly or following concentration.
- <sup>4</sup> Room exhaust air must be processed by the APP directly or following concentration.
- <sup>5</sup> The exhaust air under paragraphs 2–4 must be processed by the APP after production has been completed (APP stopping time).
- <sup>6</sup> Paragraphs 3–5 do not apply if it is established that the exhaust air due to its negligible VOC concentration is unlikely to be processed by the APP.
- <sup>7</sup> There must be an up-to-date maintenance plan for the exhaust air system, which in particular sets out how it is guaranteed that:
  - a. the exhaust air system is airtight;
  - b. components that are essential to the system are quickly replaced.
- <sup>8</sup> The ventilation in working spaces with mechanically generated incoming air must be operated, provided this is technically and operationally possible and economically feasible, so that negative pressure is maintained if:
  - a production building has only one working space and this emits an annual load at least 500 kg of VOCs;
  - b. a production building has several working spaces and they emit an annual total load of at least 1000 kg of VOCs; or
  - a production building has several working spaces and one of these working spaces emits an annual load of at least 500 kg of VOCs.

<sup>&</sup>lt;sup>52</sup> Inserted by No II para. 3 of the O of 27 June 2012 (AS **2012** 3785). Revised by No II of the DETEC Ordinance of 28 Nov. 2016, in force since 1 Jan. 2017 (AS **2016** 4923).

# 113 Container caps

Containers for VOCs must be fitted with suitable caps.

### 114 Work organisation

- <sup>1</sup> Up-to-date working regulations must be provided regulating the low-emission handling of solvents. Regulations must also be provided on how to deal with leakages of solvents.
- <sup>2</sup> Employees must be trained regularly in how to apply the working regulations.
- <sup>3</sup> Compliance with working regulations must be verified regularly.

#### 115 Documentation

- <sup>1</sup> An up-to-date inventory of the sources of diffuse VOC emissions and the intake and exhaust air flows must be provided. This contains in particular:
  - a ventilation plan;
  - b. a quantitative estimate of the emissions from each source.
- <sup>2</sup> Diffuse VOC emissions must be justified.

# 12 Process-specific requirements

Processes	Requirements	
Filling and decanting processes	If technically and operationally possible and eco- nomically acceptable: vapour recovery system	
	<ul> <li>Otherwise: exhaust air by means of suction hoods or shape-adapted source extractions with appropriate suction capacity via APP</li> </ul>	
<ul> <li>Mixtures of substances</li> </ul>	<ul> <li>In the case of closed mixing installations: solvent supply via closed system</li> </ul>	
	<ul> <li>In other mixing processes: equip container with border sealed cover; exhaust air from penetrations by means of suction hoods or shape-adapted source extractions with appropriate extraction capacity via APP</li> </ul>	
<ul> <li>Drying and stoving when printing, laminating and coating</li> </ul>	- In the closed system	

Processes		Requirements	
_	Cleaning of containers, products and components <sup>a</sup> and general cleaning	<ul> <li>Cleaning if technically possible with water or VOC- free detergents. If VOCs are used, the following re- quirements apply:</li> </ul>	
		<ul> <li>If cleaning is carried out several times a week, cleaning may only take place in closed systems with (external) preparation of the waste solvents</li> </ul>	
		<ul> <li>Opening of the cleaning system to remove the cleaned container, products and components must be synchronised with the starting extraction via the ALURA so that no VOC emissions escape into the working space or into the environment</li> </ul>	
		<ul> <li>Open manual cleaning and drying only in closed spaces with exhaust air via APP; forced closure of the cover of the cleaning tank immediately after cleaning</li> </ul>	
		<ul> <li>Store cleaning utensils contaminated with solvents in sealed containers</li> </ul>	
-	Storage	<ul> <li>In sealed containers or in the closed system; pressure balance with exhaust air via APP or back-pressure valve</li> </ul>	
-	Disposal	<ul> <li>Pipeline to waste disposal centre or by means of closed containers</li> </ul>	

# 13 Equivalent requirements

The requirements in terms of this Annex may on request be replaced by other requirements provided diffuse VOC emissions are thereby reduced at least to the same extent.

# 2 Industry-specific guidelines

- <sup>1</sup> The FOEN shall issue industry-specific guidelines in order to specify the requirements in terms of this Annex. These may lay down additional industry-specific requirements.
- <sup>2</sup> It shall review the guidelines every five years.
- <sup>3</sup> When issuing or reviewing the guidelines, it shall consult the industries and cantons concerned and take account of technical developments.
